

MEng Robotics
For students entering Part 1 in 2007

UCAS code: H675

Awarding Institution:	The University of Reading
Teaching Institution:	The University of Reading
Relevant QAA subject benchmarking group(s):	Computing
Faculty of Science	
Programme length:	4 years
Date of specification:	2/02/10
Programme Director:	Dr. V.F.Ruiz
Programme Adviser:	Dr R.J.Mitchell (Cybernetics), Dr G.T.McKee (Computer Science)
Board of Studies:	Cybernetics
Accreditation:	British Computer Society, Institution of Engineering and Technology; Institute of Measurement and Control

Summary of programme aims

The programme aims to describe the subject of Robotics, covering the relevant parts of control, computing, electronics and intelligent systems. The programme is distinctive in that it concentrates on the robotic aspects of Cybernetics, Computer Science and Electronic Engineering. (For a full statement of the programme aims and learning outcomes see below)

Transferable skills

The University's Strategy for Teaching and Learning has identified a number of generic transferable skills which all students are expected to have developed by the end of their degree programme. In following this programme, students will have had the opportunity to enhance their skills relating to career management, communication (both written and oral), information handling, numeracy, problem-solving, team working and use of information technology.

As part of this programme students are expected to have gained experience and show competence in the following transferable skills: IT (word-processing, using standard and mathematical software, scientific programming), scientific writing, oral presentation, team-working, problem-solving, use of library resources, time-management, career planning and management, and business awareness.

Programme content

The profile which follows states which modules must be taken (the compulsory part), together with one or more lists of modules from which the student must make a selection (the "selected" modules). Students must choose such additional modules as they wish, in consultation with their programme adviser, to make 120 credits in each Part. The number of modules credit for each module is shown after its title.

Part 1 (three terms)

Compulsory modules

		<i>Credits</i>	<i>Level</i>
SE1CA5	<i>Cybernetics and Its Application</i>	20	C
SE1SA5	<i>Programming</i>	20	C
SE1SB5	<i>Software Engineering</i>	20	C
SE1EA5	<i>Electronic Circuits</i>	20	C
SE1EB5	<i>Computer and Internet Technologies</i>	20	C
SE1CB5	<i>Engineering Mathematics</i>	20	C

Part 2 (three terms)		<i>Credits</i>	<i>Level</i>
<i>Compulsory modules</i>			
CY2A7	<i>Control and Measurement</i>	20	I
CY2C6	<i>Systems and Robotics</i>	20	I
CS2T7	<i>Introduction to Algorithms</i>	10	I
EE2C2	<i>Digital Circuit Design</i>	10	I
CY2H6	<i>Further Computer Systems</i>	10	I
SE2P6	<i>Engineering Applications</i>	20	I
CY2D7	<i>Neurocomputation</i>	20	I
CS2R7	<i>Space Robotics</i>	10	I
Part 3 (three terms)		<i>Credits</i>	<i>Level</i>
<i>Compulsory modules</i>			
SE3P9	<i>MEng Group Project</i>	30	H
CS3Y7	<i>Robot Systems</i>	10	H
CY3G2	<i>Modern Heuristics</i>	10	H
CY3J8	<i>Machines in Motion</i>	10	H
SE3Z5	<i>Social, Legal and Ethical Aspects of Science and Engineering</i>	20	H
<i>Optional modules - choose modules from the following so 120 credits in total</i>			
CS3U7	<i>Image Analysis</i>	10	H
CS3V7	<i>Visual Intelligence</i>	10	H
CY3B9	<i>Machine Intelligence</i>	10	H
CY3K7	<i>Bionics</i>	10	H
CY3F8	<i>Virtual Reality</i>	10	H
CY3L2	<i>Mechatronics</i>	10	H
CY3C2	<i>State Space</i>	10	H
CY3H2	<i>Non-Linear Control</i>	10	H
CY3O7	<i>Vibrations and Materials for Robotics</i>	10	H
LAXXX	<i>Language from IWLP</i>	20	H
Part 4 (three terms)		<i>Credits</i>	<i>Level</i>
<i>Compulsory modules</i>			
SE4P6	<i>MEng Research Project</i>	40	M
CY4J9	<i>Manipulator Dynamics and Haptics</i>	10	M
SE4R9	<i>Research Studies</i>	10	M
SE4S9	<i>Law and Management</i>	10	M
<i>Optional modules must be chosen to give a total of 120 credits.</i>			
CS4E7	<i>Computational Robotics</i>	10	M
CS4V10	<i>Visual Intelligence</i>	10	M
CY4A2	<i>Advanced Control</i>	20	M
CY4B2	<i>Mind as Motion</i>	10	M
CY4C9	<i>Advanced Neural Networks</i>	10	M
CY4F8	<i>Swarm Intelligence and Artificial Life</i>	10	M
CY4I7	<i>Biomechanics</i>	10	M
CY4M8	<i>Medical Image and Signal Processing</i>	10	M
MMM038	<i>Practice of Entrepreneurship</i>	20	M

Progression requirements

To gain a threshold performance at Part 1 and qualify for the CertHE a student shall normally be required to achieve an overall average of 40% over 120 credits taken in Part 1, where all the credits are at C level or above, and a mark of at least 30% in individual modules amounting to not less than 100 credits. In order to progress from Part 1 to Part 2, a student shall normally be required to achieve a threshold performance at Part 1, and to have no module mark below 30%.

To gain a threshold performance at Part 2 and qualify for the DipHE a student shall normally be required to achieve an overall average of 40% over 120 credits taken in Part 2, and a mark of at least 30% in individual modules amounting to not less than 100 credits. In order to progress from Part 2 to Part 3, a student shall normally be required to achieve a threshold performance at Part 2 and achieve an overall average of 60% in the 120 credits taken in Part 2. A student whose average is below 60% may be qualified for the BSc Robotics degree.

Summary of teaching and assessment

Teaching is organised in modules that typically involve lectures and tutorial or laboratory practicals. Most modules are assessed by a mixture of coursework and formal examination. Some modules, for example the Part 3 project, are assessed only as coursework. Details are given in the relevant module description.

A student must obtain at least 40% in both their projects (SE3P9 and SE4P6) to be eligible for honours. Note, the Part 3 Project taken must be one with appropriate Robotics content.

The relative contributions to the final assessment of Parts 2, 3 and 4 are 1:2:2.

Admission requirements

Entrants to this programme are normally required to have obtained:

Grade B or better in Combined Science and grade B or better in Mathematics at GCSE; and achieved

UCAS Tariff: 320 points with grade B or better in Mathematics and Physics, or equivalent

International Baccalaureat: 32 points.

Equivalent qualifications are acceptable.

Admissions Tutor: Dr Will Browne

Support for students and their learning

includes IT Services, which has several hundred computers and the University Library, which across its three sites holds over a million volumes, subscribes to around 4,000 current periodicals, has a range of electronic sources of information and houses the Student Access to Independent Learning (S@IL) computer-based teaching and learning facilities. There are language laboratory facilities both for those students studying on a language degree and for those taking modules offered by the Institution-wide Language Programme.

Student guidance and welfare support is provided by Personal Tutors, School Senior Tutors, the Students' Union, the Medical Practice and the Student Services Centre. The Student Services Centre is housed in the Carrington Building and includes the Careers Advisory Service, the Disability Advisory Service, Accommodation Advisory Team, Student Financial Support, Counselling and Study Advisors. Student Services has a Helpdesk available for enquiries made in person or online (www.risisweb.reading.ac.uk), or by calling the central enquiry number on (0118) 378 5555. Students can get key information and guidance from the team of Helpdesk Advisers, or make an appointment with a specialist adviser; Student Services also offer drop-in sessions on everything from accommodation to finance. The Carrington Building is open between 8:30 and 17:30 Monday to Thursday (17:00 Friday and during vacation periods). Further information can be found in the Student Diary (given to students at enrolment) or on the Student website (www.reading.ac.uk/student).

Within the providing School additional support is given through practical laboratory classes. The development of problem-solving skills is assisted by appropriate assignment and project work. There is a Programme Adviser to offer advice on the choice of modules within the programme. Course handbooks are provided for each Part of the course: these give more details about the modules which make up the degree. In addition, the School produces a Handbook for Students, which provides general information about the staff and facilities within the school.

Career prospects

Career prospects for the School's graduates tend to be good as the courses are very relevant to today's high technology society and, because the courses are not dependent upon any one industry, graduates are employed in a variety of areas. Some graduates join large companies, often IT based companies; others join smaller companies and consultancies; and some choose to further their research interests either in the School or at other Universities. Graduates from this programme may, after a period of professional experience, together with other appropriate educational requirements, apply for Chartered Engineer status.

Opportunities for study abroad or for placements

N/A

Educational aims of the programme

The programme aims to combine an understanding of systems in general, but with particular relevance to robotic systems and their application; to appreciate relevant modern technology and techniques; to produce good practically oriented engineers whose systems grounding allows them to work in an industrial or academic environment, as individuals or as part of a team. The programme is distinctive in that it concentrates on Robotics and includes relevant aspects of cybernetics, computing and electronic engineering.

Programme Outcomes

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, skills, qualities and other attributes in the following areas:

Knowledge and Understanding

<p>A. Knowledge and understanding of:</p> <ol style="list-style-type: none">1. Appropriate mathematical techniques to help model and analyse systems2. Science underlying robotic systems.3. Information technology.4. Systems design.5. Relevant management and business practices6. Engineering practice.	<p>Teaching/learning methods and strategies</p> <p>The knowledge required for the basic topics is obtained via lectures, tutorials, laboratory practicals, assignments and project work. Appropriate IT packages are taught. Demonstrators in laboratory and project supervisors advise students, and feedback is provided on all continually assessed work. As the course progresses, students are expected to show greater initiative and undertake independent research.</p> <p><i>Assessment</i></p> <p>Most knowledge is tested through a combination of practicals, assignments and formal examinations (open book in parts 3 and 4): students write reports on most assignments after part 1, and oral presentations also contribute.</p>
---	---

Skills and other attributes

<p>B. Intellectual skills – able to:</p> <ol style="list-style-type: none">1. Select and apply appropriate scientific principles, mathematical and computer based methods for analysing robotic systems.2. Analyse and solve robotic problems.3. Be creative.4. Organise tasks into a structured form.5. Understand the evolving state of knowledge in a rapidly developing area.6. Transfer appropriate knowledge and methods from Robotics to related disciplines.7. Plan, conduct and write a report on a project or assignment.8. Prepare an oral presentation.	<p>Teaching/learning methods and strategies Appropriate mathematical, scientific and IT skills and tools are taught in lectures, and problems to be solved are given as projects or assignments. Project planning is part of the Part 3 project, and written and oral presentations are required for various assignments and projects. In the latter part of the course, some of the research in Robotics and related subjects is presented.</p> <p><i>Assessment</i> 1-6 are assessed partly by examination, though sometimes also by project or assignment work. 7 and 8 are assessed as part of project work.</p>
<p>C. Practical skills – able to:</p> <ol style="list-style-type: none">1. Use appropriate mathematical methods or IT tools.2. Program a computer to solve problems.3. Use relevant laboratory equipment and analyse the results critically.4. Design, build and test a system.5. Research into robotic problems.6. Use project management methods.7. Present work.	<p>Teaching/learning methods and strategies Mathematics and IT tools are introduced in lectures and their use is assessed by examinations and assignments. Programming assignments are set, and students may write programs to solve other projects. Laboratory practicals and projects are used to teach about 3, and projects are used for 4, 5, 6 and 7.</p> <p><i>Assessment</i> 1 and 5 are tested in coursework and in examinations. 2, 5 and 7 are tested by assignments and projects, 3 is assessed in practicals and sometimes in projects, 4, 5 and 6 are assessed through project work.</p>
<p>D. Transferable skills – able to:</p> <ol style="list-style-type: none">1. Use IT tools.2. Acquire, manipulate and process data.3. Use creativity and innovation.4. Solve problems.5. Communicate scientific ideas.6. Give oral presentations.7. Work as part of a team.8. Use information resources.9. Manage time.	<p>Teaching/learning methods and strategies Some IT tools are taught in lectures, but most through laboratory sessions and assignments. Data skills are acquired in laboratory and projects. Creativity and problem solving are experienced through projects, as are team working, time management and presentations. Use of information resources, such as the library and IT methods, is experienced through projects and assignments.</p> <p><i>Assessment</i> Some skills, like the use of IT tools and the ability to communicate orally and in written form are directly assessed, in assignments or projects, other skills are not directly assessed but their effective use will enhance the students overall performance.</p>

Please note - This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each module can be found in the module description and in the programme handbook. The University reserves the right to modify this specification in unforeseen circumstances, or where the process of academic development and feedback from students, quality assurance processes or external sources, such as professional bodies, requires a change to be made. In such circumstances, a revised specification will be issued.
