The University of Reading The University of Reading Engineering Programme length: 3 years Date of profile: 26/03/03

# Summary of programme aims

The programme aims to combine an appreciation of human and biological systems and how they incorporate feedback; and to understand humans, relevant technology and their interaction. (For a full statement of the programme aims and learning outcomes see below)

### Transferable skills

The University's Strategy for Teaching and Learning has identified a number of generic transferable skills which all students are expected to have developed by the end of their degree programme. In following this programme, students will have had the opportunity to enhance their skills relating to career management, communication (both written and oral), information handling, numeracy, problem-solving, team working and use of information technology.

As part of this programme students are expected to have gained experience and show competence in the following transferable skills: IT (word-processing, using standard and mathematical software, scientific programming), scientific writing, oral presentation, team-working, problemsolving, use of library resources, time-management, career planning and management, and business awareness.

### **Programme content**

The profile which follows states which modules must be taken (the compulsory part), together with one or more lists of modules from which the student must make a selection (the "selected" modules). Students must choose such additional modules as they wish, in consultation with their programme adviser, to make 120 credits in each Part. The number of modules credit for each module is shown after its title.

Par	rt 1 (three te	rms)	Credits	Level
Сог	npulsory mod	dules		
	CY1A2	Cybernetics and Its Application	20	С
	SE1A2	Introduction to Computer Systems	10	С
	CS1G2	Introduction to Algorithms	10	С
and	l either both			
	SE1B2	Systems and Circuits	20	С
	EG1C2	Engineering Mathematics	20	С
or	CY1B2	Analysis of Cybernetic Systems	20	С
and	l either both			
	CS1A2	Programming 1	10	С
	CS1B2	Programming 2	10	С
or l	ooth			
	CS1C2	Introductory Programming 1	10	С
	CS1D2	Introductory Programming 2	10	С

**Optional modules** 

(Depending on choices from the above, the student should choose modules worth a further 20 or 40 credits, thereby having a total of 120 credits)

Progression requirements

In order to progress from Part 1 to Part 2 students must:

- Achieve an overall average of 40% in 120 credits taken in Part 1; and
- Achieve not less than 30% in modules taken in Part 1, but note \* below.

In order to progress from Part 2 to Part 3 students must:

- Achieve an overall average of 40% in 120 credits taken in Part 2; and
- Achieve not less than 30% in modules taken in Part 2, but note \* below.

\* except that marks of less than 30% in a total of 20 credits may be condoned provided that the candidate has pursued the course for the module with reasonable diligence and has not been absent from the examination without reasonable cause.

### Summary of teaching and assessment

Teaching is organised in modules that typically involve lectures and tutorial or laboratory practicals. Most modules are assessed by a mixture of coursework and formal examination. Some modules, for instance the Part 3 project, are assessed only as coursework.

To be eligible for honours the student must obtain an overall average mark of at least 40% and at least 40% in the Part 3 project.

Part 2 contributes one third of the final degree assessment and Part 3 contributes two thirds.

### **Admission requirements**

Entrants to this programme are normally required to have obtained:

Grade B or better in Combined Science and grade B or better in Mathematics at GCSE; and achieved

UCAS Tariff: 260 points including C or better in a Science subject or Mathematics; or International Baccalaureat: 29 points; or

Irish Leaving Certificate: BBBCC, including B or better in Maths and a Science

Admissions Tutor: Dr Mark Bishop

# Support for students and their learning

University support for students and their learning falls into two categories. Learning support includes IT Services, which has several hundred computers and the University Library, which across its three sites holds over a million volumes, subscribes to around 4,000 current periodicals, has a range of electronic sources of information and houses the Student Access to Independent Learning (S@IL) computer-based teaching and learning facilities. There are language laboratory facilities both for those students studying on a language degree and for those taking modules offered by the Institution-wide Language Programme. Student guidance and welfare support is provided by Personal Tutors, the Careers Advisory Service, the University's Special Needs Advisor, Study Advisors, Hall Wardens and the Students' Union.

Within the providing Department additional support is given though practical laboratory classes. The development of problem-solving skills is assisted by appropriate assignment and project work. There is a Course Adviser to offer advice on the choice of modules within the programme. Course handbooks are provided for each Part of the course: these give more details about the modules which make up the degree. In addition, the School of Computer Science, Cybernetics and Electronic Engineering produces a Handbook for Students, which provides general information about the staff and facilities within the school.

### **Career prospects**

Career prospects for Cybernetists tend to be good as the courses are very relevant to today's high technology society and, because the courses are not dependent upon any one industry, graduates are employed in a variety of areas. Some graduates join large companies, often IT based companies; others join smaller companies and consultancies; and some choose to further their research interests either in the Department or at other Universities.

### **Opportunities for study abroad**

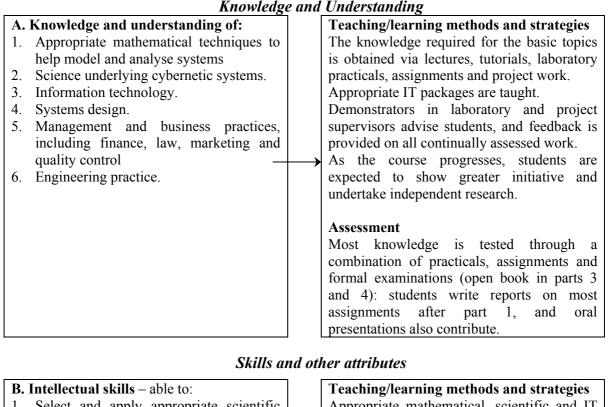

NA

### Educational aims of the programme

The programme aims to combine an appreciation of human and biological systems and how they incorporate feedback; to understand humans, relevant technology and their interaction; to produce cybernetists whose systems grounding allows them to work as designers or managers, in an industrial or academic environment, as individuals or as part of a team. The programme is distinctive as it considers the 'animal' aspects of Cybernetics, following the Wiener definition of Cybernetics.

### **Programme Outcomes**

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, skills, qualities and other attributes in the following areas:

### Knowledge and Understanding

1. Select and apply appropriate scientific Appropriate mathematical, scientific and IT principles, mathematical and computer skills and tools are taught in lectures, and based methods for analysing general problems to be solved are given as projects or assignments. Project planning is part of cybernetic systems. 2. Analyse and solve cybernetic problems. the Part 3 project, and written and oral 3. Be creative. presentations are required for various 4. Organise tasks into a structured form. assignments and projects. 5. Understand the evolving state of In the latter part of the course, some of the knowledge in a rapidly developing area. research in Cybernetics is presented. 6. Transfer appropriate knowledge and Assessment methods from one topic in cybernetics to 1-6 are assessed partly by examination, though sometimes also by project or another. 7. Plan, conduct and write a report on a assignment work. 7 and 8 are assessed as part project or assignment. of project work. 8. Prepare an oral presentation.

*Please note:* This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably expect to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each module can be found in module and programme handbooks.
