MPhys PHYSICS

UCAS Code: F303

Degree programme for students entering Part 1 in October 2002

Awarding Institution:	The University of Reading
Teaching Institution:	The University of Reading
Relevant QAA subject benchmarking group:	Physics
Faculty of Science	Programme length: 4 years
-	

Date of specification:	14 May 2004
Programme Director:	Dr D Dunn
Programme Adviser :	Dr P A Hatherly
Board of Studies:	MMP

Accreditation: This degree programme is accredited by the Institute of Physics

Aims: To provide graduates with a secure and demonstrable knowledge and skills base in physics with sufficient scope, depth and experience of research through project work to fit them for a career in physics or for further postgraduate physics studies.

Transferable skills

The University's Strategy for Teaching and Learning has identified a number of generic transferable skills that all students are expected to have developed by the end of their degree programme. In following this programme, students will have had the opportunity to enhance their skills relating to career management, communication (both written and oral), information handling, numeracy, problem-solving, team working and use of information technology.

By the end of the programme students are expected to have gained experience and show competence in the following transferable skills: IT (word-processing, using standard and mathematics software), scientific writing, oral presentation, team-working, problem-solving, use of library resources, time-management, career and management and planning.

Programme content

The profile that follows states which modules must be taken (the compulsory part), together with one or more lists of modules from which the student must make a selection (the "selected" modules). Students must choose such additional modules as they wish, in consultation with their programme adviser, to make 120 credits in each Part. The number of modules credit for and the level of each module are shown in brackets after its title.

PART 1 (2002-2003)

Compulsory Modules

Module Code	Module Name	Credits	Level
PH1001	Concepts in Physics	20	С
PH1002	Classical Physics	20	С
PH1003	Mathematical Physics	20	С
PH1004	Experimental Physics I	20	С
PH1101	Current Research Topics I	10	С
PH1201	Problem-solving	10	С

Selected Modules

Modules to a total of 20 credits selected from: Physics			
PH1005	Exploring the Universe	20	С
Computer Science			
CS/1/A2	Programming 1	10	С
CS/1/B2	Programming 2	10	С
CS1C2	Introductory Programming 1	10	С
CS1D2	Introductory Programming 2	10	С
Chemistry CH1A2	Intro. to Inorganic & Physical Chemistry	20	С
Language	Part I IWLS Language module	20	
	r unt i i i i Es Eunguage module		

Timetabling constraints may mean that not all of these options are available.

PART 2 (2003-2004)

Compulsory Modules

Module	Module Name	Credits	Level
PH2001	Thermal Physics	20	Ι
PH2002	Quantum Physics	20	Ι
PH2003	Electromagnetism	20	Ι
PH2004	Experimental Physics II	20	Ι
PH2401	Programming Skills	10	Ι
PH2501	Applied Physics	10	Ι

Selected Modules

Select ONE of			
Module Code	Module Name	Credits	Level
PH2007	Group Projects in Physics	20	Ι
	IWLS language module	20	

PART 3 (2004 - 2005)

Compulsory Modules

Module	Module Name	Credits	Level
PH3701	Relativity	10	Н
PH3702	Condensed Matter	10	Н
PH3703	Atomic & Molecular Physics	10	Н
PH3801	Nuclear & Particle Physics	10	Н
PH3707	Computational Physics I	10	Н
PH3002	Advanced Experimental Physics	20	Н
PH3711	Career Skills	10	Н
PH3808	Computational Physics II	10	Н

PH3809	Problem-Solving in Physics	10	Η
--------	----------------------------	----	---

Selected Modules

Choose TWO from:			
PH3708	Medical Physics	10	М
PH3713	Laser Physics	10	М
PH3804	Fractals & Chaos	10	М
PH3806	Atomic & Molecular Physics II	10	Η
PH3807	Cosmology I	10	Η
PH3811	Stellar physics	10	Н

Mathematics and Meteorology modules may be selected subject to time-tabling constraints and with the approval of the Programme Director.

PART 4 (2005 - 2006)

Compulsory Modules

PH4001	Research Project	60	М
PH4A03	Current Topics	10	М

Selected Modules

Select FIVE of the following: At least THREE must be at level M and a module taken in Part 3 cannot be repeated.			
PH3806	Atomic & Molecular Physics II	10	Ĥ
PH3807	Cosmology I	10	Н
PH3811	Stellar physics	10	Н
PH3708	Medical Physics	10	Μ
PH3807	Cosmology I	10	Н
PH3804	Fractals & Chaos	10	М
PH4A01	Advanced Quantum Theory	10	Μ
PH4A02	Lagrangian Field Theory & Symmetry	10	Μ
PH4B04	Particle Physics and the Standard Model	10	Μ
PH4B01	Statistical Physics & Critical Phenomena	10	М
PH4B02	Modern Spectroscopic Techniques	10	Μ

Progression

To proceed to Part 2 of this degree it is sufficient to obtain an average of at least 40% overall with no module mark below 30%.

Marks of less than 30% in modules to a total of 20 credits, except for modules PH1001, PH1002, PH1003, and PH1004, may be condoned provided that the candidate has pursued the course for the module with reasonable diligence and has not been absent from the examination without reasonable cause.

To proceed to Part 3 of this degree it is sufficient to obtain an average of at least 50% overall, with no module mark below 30%.

Marks of less than 30% in modules to a total of 20 credits, except modules PH2001, PH2002, PH2003 and PH2004, may be condoned provided that the candidate has pursued the course for the module with reasonable diligence and has not been absent from the examination

without reasonable cause.

Summary of teaching and assessment

A wide variety of teaching/learning methods are used; lectures; problem-solving workshops; independent-learning; FLAP; practical laboratories; computational laboratories; projects. The teaching is organised in modules: In a typical lecture-based module the teaching is supplemented by problem-solving workshops that provide interaction between student and lecturer.

Modules are assessed by a combination of continuous assessment and formal examinations. The aim of the continuous assessment is to provide feedback to each student as the module progresses.

The final-year project (under the guidance of a project supervisor) provides an opportunity for independent learning and investigation.

The contributions of Parts 2, 3 and 4 to the final degree assessment will be in the proportions 1:2:2.

Admission requirements

Entrants to this programme are normally required to have at least:

UCAS Tariff 280 pts, including 180 pts in physics and mathematics.

There is no points distinction between BSc and MPhys entry but MPhys has more stringent progression rules at the end of the second year.

Admissions Tutor: Dr M Hilton.

Support for students and their learning

University support for students and their learning falls into two categories. Learning support includes IT Services, which has several hundred computers and the University Library, which across its three sites holds over a million volumes, subscribes to around 4,000 current periodicals, has a range of electronic sources of information and houses the Student Access to Independent Learning (S@IL) computer-based teaching and learning facilities. There are language laboratory facilities both for those students studying on a language degree and for those taking modules offered by the Institution-wide Language Programme. Student guidance and welfare support is provided by Personal Tutors, the Careers Advisory Service, the University's Special Needs Advisor, Study Advisors, Hall Wardens and the Students' Union.

Within the contributing departments additional support is given though practical classes in Part 1. The development of problem-solving skills is assisted by extensive provision of model solutions to problems. There is a Course Adviser to offer advice on the choice of modules within the programme.

Career prospects

In recent years the graduates on Reading physics-based degrees have progressed to careers in

- Scientific Research in Government and Industrial Laboratories
- Computing and IT industry
- Electronic engineering

- Production engineering
- Management in industry
- Accountancy and Financial Sector

and also to Further education (PhD, MSc and BEd degrees).

Opportunities for study abroad

There are no formal arrangements for this degree programme but a transfer to the degree *Physics with a Year in Europe* may be possible.

Educational aims of the programme

address familiar and unfamiliar problems

4. Collect and integrate evidence to

formulate and test hypotheses

To provide graduates with a secure and demonstrable knowledge and skills base in physics with sufficient scope, depth and experience of research through project work to fit them for a career in physics or for further postgraduate studies in physics.

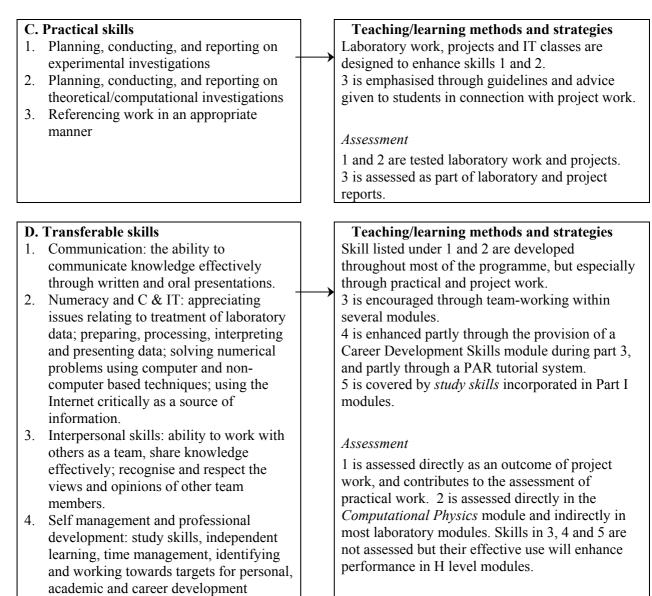

Programme Outcomes

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, skills, qualities and other attributes in the following areas:

	A. Knowledge and understanding of:		Teaching/learning methods and strategies			
	1. The empirical nature of physics: that		The knowledge required for the basic topics is			
	theories must be testable and must be		delineated in formal lectures supported by			
	tested quantitatively.		problem-solving workshops.			
	2. The core topics of physics: classical and		The knowledge required for more specialist topics			
	quantum mechanics; thermal and		is enhanced through self-learning based on guided			
	statistical physics; wave, optics and		reading, problem solving and project work.			
	electromagnetism; particle physics.		Investigation of some of current research topics in			
	3. The application of physical and —	\rightarrow	undertaken as a series of team projects in each of			
	mathematical methods to the description,		the first three years			
	modelling and prediction of physical		Assessment			
	phenomena.					
	4. Some of the frontiers of current research		Most knowledge is tested through a combination			
			of coursework and unseen formal examinations.			
			Practical work is assessed by means of logbooks,			
			reports and viva examinations. Dissertation and			
ļ			oral presentations also contribute.			
	Skills and o	other	· attributes			
	B. Intellectual skills – the ability to:		Teaching/learning methods and strategies			
	1. Recognise and use subject-specific		Most modules are designed to develop 1 and 2.			
	theories, paradigms, concepts and	\rightarrow	1, 2 and 3 are enhanced through the use of			
	principles		coursework assignments, and project work. 4 is			
	2. Analyse, synthesise and summarise		enhanced mainly by project work.			
	information critically					
	3. Apply knowledge and understanding to		Assessment			

Knowledge and Understanding

1-3 are assessed indirectly in most parts of the programme. 3 is also assessed by a general problem-solving paper in finals. 4 is assessed in the final-year research project.

5. Library skills: the effective use of library and internet resources.

Please note: This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably expect to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each module can be found in module and programme handbooks.
