BSc Microbiology

Awarding Institution: Teaching Institution: Relevant QAA subject benchmarking group(s) Programme length: 3 years Faculty of Life Sciences For students entering Part 1 in 2002 Programme Director: Professor IM Jones Programme Adviser: Dr Sheila MacIntyre Board of Studies: Biomolecular Accreditation: None

Summary of programme aims

The course will deliver a broad understanding of the fundamental principles of Microbiology emphasising Bacteriology and Virology. The diverse aspects of the field covered include biochemistry, ecology, genetics, molecular biology, pathogenicity, phylogeny and physiology. In year 1, an understanding of principles of modern biology and basic characteristics of microorganisms will be achieved. By the end of year 2, students will have a deeper understanding of the core areas of microbiology. In the final year, an in-depth comprehension of selected topics at the forefront of Microbiology will be acquired. Students will also develop a range of subject-specific and transferable skills including: practical skills in microbiology and related subjects; an ability to analyse and evaluate scientific information; and experience in the methodology of research and scholarship.

Transferable skills

The University's Strategy for Teaching and Learning has identified a number of generic transferable skills which all students are expected to have developed by the end of their degree programme. As part of this programme students are expected to have gained experience and show competence in the following transferable skills: Communication, Numeracy, Problem-solving, Team working, Use of Information Technology, Business Awareness, Information Handling, Career Management.

Programme content

The profile which follows states which modules must be taken (the compulsory part), together with one or more lists of modules from which the student must make a selection (the 'selected' modules). Students must choose such additional modules as they wish, in consultation with their Programme Adviser, to make 120 credits in each Part. The number of module credits for each module is shown in brackets after its title.

Programme content

Part 1 (three terms) Compulsory modules		Credits	Level
BI1S11	Concepts and skills in biology 1	10	С
BI1C10	Cell biology and biochemistry	10	С
BI1C11	Genetics and molecular biology	10	С
BI1M10	Biodiversity	10	С

UCAS code: C 500

The University of Reading The University of Reading Biosciences

Date of specification: March 2004

AM1M11	Fundamental microbiology	10	C
AM1M12	Important microbes	10	C
AM1M13	Practical biochemistry	10	C
<u>C4-1</u>	and a most 16 and 16 and an in the minter most tales.		

Students without a post-16 qualification in chemistry must take:

BI1S10	Chemistry for biologists	10	С
--------	--------------------------	----	---

Optional modules

Students will choose a further 4 or 5 modules up to a final total of 120 credits subject to the agreement of the Programme Adviser.

Part 2 (three terms)

Compulsory modules

AM2S31	Concepts and skills 2	10	Ι
AM2C31	Molecular biology and bioinformatics	10	Ι
AM2M33	Practical virology	10	Ι
AM2M32	Physiology of the bacterial cell	10	Ι
AM2M31	Viruses and their hosts	10	Ι
AM2M34	Molecular genetics of bacteria	10	Ι
AM2Z35	Immunology	10	Ι
AM2C39	Regulation of gene expression	10	Ι
AM2C40	Recombinant DNA exercise	10	Ι

Optional modules

Students will choose a further 30 credits subject to the agreement of the Programme Adviser, but will be encouraged to include any of the following:

AM2C35	Cellular biology	10	Ι
AM2C36	Structural biochemistry	10	Ι
AM2M35	Medical microbiology	10	Ι
AM2C34	Introduction to human disease	10	Ι
CH2S1	Chemistry for AMS students	10	Ι
PS2HS5	Introduction to fungi	10	Ι
FB2MF2	Control of microbial hazards in food	10	Ι

Part 3 (three terms)

Compulsory modules

AM3S75	Project	40	Η
AM3S76	Essays and seminars	20	Η
AM3M71	Specialised groups of bacteria	10	Η
AM3M72	Bacterial pathogenicity	10	Η
AM3M73	Viruses as pathogens	10	Η
AM3M74	Molecular microbiology	10	Η

Optional modules

Students will choose a further 20 credits subject to the agreement of the Programme Adviser. Suitable choices would be:

AM3C80	Cancer	10	H
AM3C73	Chromosome mapping and genetic disease	10	H
AM3C77	Structural biology	10	H
AM3C72	Life and death of the cell	10	H

Progression requirements

To proceed to Part 2 it is sufficient to have obtained at least 40% in all modules averaged together and to have no module mark below 30%. However, module marks equivalent to 20 credits may be condoned if the student has attempted the examination and shown reasonable diligence in attending the modules.

To proceed from Part 2 to Part 3 it is sufficient to obtain an overall average of at least 40% and have no module mark below 30%. However, module marks equivalent to 20 credits may be condoned if the student has attempted the examination and shown reasonable diligence in attending the modules.

Summary of teaching and assessment

Teaching is organised in modules. Teaching in Part 1 consists of lectures and practical classes with small group work being largely restricted to the Concepts and Skills module. Modules can be assessed by 100% coursework but more usually are assessed by a combination of coursework (20%) and formal examination (80%).

In Parts 2 and 3, lectures and practical classes continue to be major modes of teaching but they are increasingly supplemented by seminars and other group work. Modules can be 100% in-course assessed but are more usually assessed by a combination of coursework (30%) and formal examination (70%). Part 2 contributes one third of the overall assessment and Part 3 the remaining two thirds. In order to be eligible for Honours, students must gain at least 40% in all Part 3 examinations averaged together and must gain at least 40% in the Biology Project module.

The assessment is carried out within the University's degree classification scheme, details of which are in the programme handbooks.

Transferable skills

By the end of the course students will be expected to have reached an appropriate level of competence in a number of transferable skills which include: the ability to communicate clearly and effectively both orally and in writing, being responsible for their own learning, information retrieval, data handling, the use of information technology and the ability to work effectively as individuals and in a group. Students will have been encouraged to become aware of career opportunities and of the organisation and activities of science-based business and to have taken steps to plan their career path.

Admission requirements

Entrants to this programme are normally expected to have achieved UCAS Tariff: 260 points from no more than 4 A/AS levels, including B in A-level Biology and C in another A-level Science (preferably Chemistry), plus Mathematics, Double Science and English at Grade B at GCSE level. The university supports Key Skills and will take account of points awarded for Key Skills although they are not part of the entry requirements.

Irish Highers: BBBBC (inc. Chemistry and preferably Biology)

IB: 30 points (including Chemistry and preferably Biology)

Admissions Tutor: Dr S Andrews

Career prospects

Reading Microbiology graduates are qualified to enter a variety of careers in the biological sciences, including work in industry (Pharmaceuticals, biomedical, agrochemicals), the government service (research institutes and bodies such as the Environment Agency) and other public bodies (hospitals, local water authority). As numerate scientists they also enter a wide variety of commercial and business occupations.

Opportunities for study abroad

Students in AMS can take part in the Socrates exchange programme in which they can spend the first term of Part 3 studying in a variety of other European Universities. Recent exchanges have taken place with the Universities of Bergen, Cork, Crete, Montpellier, Rostock, Tours and Uppsala.

Educational aims of the programme

After Part 1, you will have gained an understanding of several of the basic concepts of modern biochemistry. After Part 2, you will have deepened your understanding of biological concepts and developed a range of expertise over the main areas of the subject. After Part 3, you will have studied selected subjects in depth and will be equipped to tackle detailed problems and analyses.

During these studies you will be exposed to a variety of information sources and techniques and be trained in various skills including those used in reasoning, argument and communication. You will acquire a number of transferable skills including learning how to design and execute experiments (including working in a team), access information, interpret data using statistics and computing, write essays and reports and give oral presentations.

Programme Outcomes

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, skills, qualities and other attributes in the following areas:

into treage a	
A. Knowledge and understanding of: The fundamental concepts of	Teaching/learning methods and strategies
microbiology underpinned by a	
knowledge of other branches of	Formal lectures and practicals supported
molecular and cell biology.	by tutorials (in part 1), group work and miniprojects.
	Assessment
	Most knowledge is tested through a
	combination of coursework and unseen
	formal examinations. Dissertations, oral
	and poster presentations also contribute.

Knowledge and Understanding

 B. Intellectual skills – able to: 1. think logically 2. analyse and solve problems. 3. organise tasks in a structured form 4. transfer appropriate knowledge and methods from one topic to another within the overall subject 5. plan, conduct and write a report on an independent project 	Teaching/learning methods andstrategiesRational thought and logical analysis isdeveloped throughout the programme,building to an ability to deduce howsolutions to key problems in biology arederived through the application ofexperimental procedure.AssessmentEmbedded throughout the assessmentprotocols
 C. Practical skills – able to: 1. Undertake microbiological laboratory tasks and techniques 2. Plan experiments and carry them out in the laboratory 	Teaching/learning methods and strategiesFormal practical classesAssessmentBy practical laboratory reports.
 D. Transferable skills – able to: 1. Use IT 2. communicate scientific ideas 3. give oral and poster presentations 4. work as part of a team 5. use library resources 6. manage time 7. plan their career 	Teaching/learning methods and strategiesThe use of IT is embedded throughout the course.Assessment The skills will enhance the performance of students in both coursework and unseen examinations.

Skills and other attributes

Please note: This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably expect to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each module can be found in module and programme handbooks.
