# **BSc Environmental Geochemistry**

Awarding Institution: Teaching Institution: Relevant QAA subject benchmarking group(s):

Faculty of Science For students entering Part 1 in 2003 Programme Director: Dr TJ Halsall (PRIS) Programme Adviser: Dr MJ Almond (PRIS) Board of Studies: Earth & Soil Sciences

# UCAS code: F670

The University of Reading The University of Reading Earth Sciences, Environmental Sciences and Environmental Studies Programme length: 3 years Date of specification: Mar 2003

Accreditation: Recognised for Associate Membership of Royal Society of Chemistry The Geological Society of London (pending)

## Summary of programme aims

To provide a broad and rigorous study of modern geochemistry and selected applications to the environment. (For a full statement of the programme aims and learning outcomes see below)

# **Transferable skills**

The University's Strategy for Teaching and Learning has identified a number of generic transferable skills which all students are expected to have developed by the end of their degree programme. In following this programme, students will have had the opportunity to enhance their skills relating to career management, communication (both written and oral), information handling, numeracy, problem-solving, team working and use of information technology.

As part of this programme students are expected to have gained experience and show competence in the following transferable skills: IT (word-processing, using standard software packages), scientific writing, oral presentation, team-working, problem-solving, use of library resources, time-management and career planning and management. They will have developed skills in observing and recording data, analytical procedures, teamworking and leadership, and be confident and self-reliant, particularly as a result of experience during field courses. They will also have a sound knowledge of laboratory and fieldwork safety procedures.

## **Programme content**

The programme which follows states which modules must be taken (the compulsory part), together with one or more lists of modules from which the student must make a selection (the "selected" modules). Students must choose such additional modules as they wish, in consultation with their programme adviser, to make 120 credits in each Part. The number of credits for each module is listed.

Part 1 (3 terms : 2002-2003)				
Compulso	<i>ry modules</i> (100 credits)	Credits	Level	Term
CH1I1	Introduction to Inorganic Chemistry	20	С	1,2,3
CH101	Introduction to Organic Chemistry	20	С	1,2,3
CH1P1	Introduction to Physical Chemistry	20	С	1,2,3
GO1A1	Earth Structure & Processes	10	С	1
GO1B1	Earth Materials	10	С	1
GO1C2	Earth History & Evolution	10	С	2
GO1X2	Introduction to Geological Fieldwork	10	С	E.Vac

Optional n	nodules (20 credits)			
Recommer		Credits	Levels	Term
CH1M	Chemistry M	20	С	1,2,3
SS1A1	Introduction to Soil Science	10	С	1
SS1A2	Soils, Land and Environment	10	С	2
Others incl	uding:			
AM1Z11	Environmental Biology	10	С	1
BI1M10	Biodiversity	10	С	1
MT11A	Introduction to Atmospheric Science	20	С	1,2
SS1B1	Biological Processes in Soil	10	С	1
SS1B2	Soil Processes and Applications	10	С	2
Part 2 (3 t	erms : 2003-2004)			
	y modules (100 credits)	Credits	Levels	Term
CH2E1	Environmental Chemistry	20	Ι	4,5,6
CH2A2	Introductory Analytical Chemistry	10	Ī	4
CH2I2	Inorganic Chemistry	10	Ī	5
GO2A4	Introductory Environmental Geochemistry	10	Ī	4
GO2B4	Crust & Mantle Processes	10	Ī	4
GO2C4	Sedimentology	10	Ī	4
GO2I5	Analytical Geochemistry	10	Ī	5
GO2J5	Skills for Earth & Environmental Scientists	10	Ī	5
GO2X5	Environmental Geology Field Class	10	I	5
	nodules (20 credits)			
Recommen		10	т	5
ES25A	Environmental Systems		I	5
GO2E5 GO2F4	Geology Applied in SE England	10 10	I I	5
	Geophysics		-	4 5 3 4 5
GO2H5	Geological Processes and Hazards	10	I	2

SS3A7	Soil Contaminants	10	Н	7
SS3B8	Soil & Mineral Equilibria Using MINEQL+	10	Н	8
SS3C8	Soils and the Global Environment	10	Н	8

#### **Progression requirements**

Students must obtain at least 40% overall in Part 1, in addition to obtaining at least 40% in modules CH1I1, CH1O1 & CH1P1 averaged together, and in modules GO1A1, GO1B1, GO1C2 & GO1X2 averaged together, and gaining at least 30% in every module. Students must obtain at least 40% overall in Part 2, in addition to obtaining at least 40% in modules CH2E1, CH2A2, and CH2I2 averaged together, and in modules GO2A4, 2GOB4, GO2C4, GO2I5 and GO2X5 averaged together, and gaining at least 30% in every module. Marks of less than 30% in a total of 20 credits, in Part 1 and Part 2, will be condoned provided that the candidate has pursued the course for the module with reasonable diligence and has not been absent from the examination without reasonable cause.

#### Summary of teaching and assessment

Teaching is organised in modules that typically involve both lectures and practicals. Modules are assessed by a mixture of coursework and formal examinations. Part 3 project work, however, is monitored by means of tutorials with an individual advisor, and is assessed as coursework.

**Degree Assessment:** Part 2 will contribute 33% of the marks for the Final Degree classification. Part 3 will contribute 67% of the marks for the Final Degree classification.

## **Admission requirements**

Entrants to this programme are normally required to have obtained:

Grade C or better in English GCSE; and achieved

UCAS Tariff: 260 points from 3 A Levels or 300 points from 4 A Levels. Must include a minimum of C in A Level Chemistry, plus one other subject from Maths, Physics, Biology, Geography, Geology or Environmental Science.

Admissions Tutor: Dr Hazel McGoff

## Support for students and their learning

University support for students and their learning falls into two categories. Learning support includes IT Services, which has several hundred computers and the University Library, which across its three sites holds over a million volumes, subscribes to around 4,000 current periodicals, has a range of electronic sources of information and houses the Student Access to Independent Learning (S@IL) computer-based teaching and learning facilities. There are language laboratory facilities both for those students studying on a language degree and for those taking modules offered by the Institution-wide Language Programme. Student guidance and welfare support is provided by Personal Tutors, the Careers Advisory Service, the University's Special Needs Advisor, Study Advisors, Hall Wardens and the Students' Union.

The providing Departments have well-equipped teaching laboratories and dedicated computer laboratories. Substantial collections of earth materials and geological maps are

available for hands-on access by students. Within the providing Departments additional support for students is given through practical and field classes. There is a Course Adviser to offer advice on the choice of modules throughout the programme.

#### **Career prospects**

Environmental Geochemistry graduates have the advantage that many traditional chemistry jobs are also open to them. Previous graduates have found employment in analytical laboratories, the oil, water and electricity industries, environmental consultancies and the Environment Agency, computing and teaching and some have taken up postgraduate study before employment.

## **Opportunities for study abroad**

Students following this degree programme may transfer to the parallel degree BSc Environmental Geochemistry with Professional Experience and complete an additional year of appropriate experience with an appropriate company overseas. Such transfers are only permitted if the student displays the appropriate ability to benefit from such a secondment, has the requisite degree of fluency in the foreign language required, and, if suitable industrial experience can be found for the student.

# Educational aims of the programme

To provide a broad and rigorous study of modern geochemistry and selected applications to the environment.

Part 1 is designed to provide a sound foundation in geology and chemistry, an introduction to field work and the opportunity to select some additional introductory modules from a range of disciplines. Part 2 devotes special attention to the development of skills and technical experience, with further importance placed on fieldwork and emphasis on analytical skills and environmental systems. Part 3 is integrative and focuses on physical resources and pollution while providing scope for some specialisation through project work. The latter provides the student with the opportunity to demonstrate their ability to conduct and report on a detailed research investigation, drawing on their understanding of the fundamental concepts in environmental geochemistry.

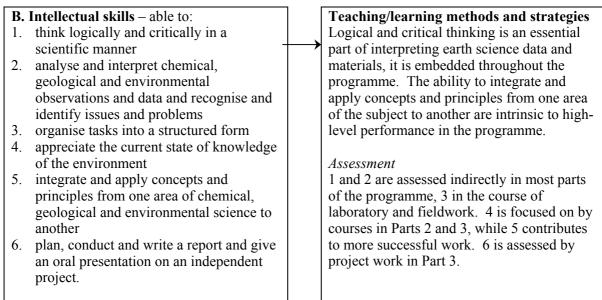

# **Programme Outcomes**

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, skills, qualities and other attributes in the following areas:

	Knowieuge und Onderstandung			
A.	Knowledge and understanding of:		Teaching/learning methods and strategies	
1.	Earth and planetary materials and how		Underlying knowledge in the essential areas	
	they are formed		is set out in lectures, in most cases directly	
2.	The fundamentals of inorganic, physical		supported by illustrative practicals. The	
	and environmental chemistry		essential field experience required for proper	
3.	The evolution of the Earth and the		understanding is provided by compulsory	
	environment through geological time,		field courses in Part 1, Part 2 and Part 3.	
	and how that understanding is arrived at		Students conduct an independent project in	
4.	The internal structure and composition of		the form of practical investigation into an	
	the Earth and internal processes		environmental topic in Part 3, with support	
5.	Processes in the surface and near-surface		and advice from academic and technical staff.	
	environment, including interactions		Assessment	
	between the solid Earth, hydrosphere,		Most knowledge is tested through a	
	atmosphere and biological agents,		combination of coursework and unseen	
	including man.		formal examinations. Written reports and	
6.	Environmental systems and issues		oral presentations also contribute in Part 3.	
7.	Earth's physical resources, their			
	occurrence, location by man and the			
	environmental issues associated with			
	their exploitation			
8.	A selected range of optional topics			
9.	Fieldwork safety issues and procedures			

#### Knowledge and Understanding

## Skills and other attributes

<ul> <li>C. Practical skills – able to:</li> <li>1. accurately observe, record and interpret earth materials and data</li> <li>2. conduct chemical and geochemical analyses using a variety of techniques</li> <li>3. conduct a practical geochemical project</li> <li>4. carry out a risk assessment for fieldwork in a given area.</li> </ul>	Teaching/learning methods and strategies Observing, recording and interpreting, and analytical skills are taught in laboratory and field classes throughout the course. An investigative independent practical project is conducted by the student in Part 3, with advice from academic and technical staff. Risk assessment forms an essential part of each field course and any field based project work.Assessment 
<ul> <li>D. Transferable skills – able to:</li> <li>1. use IT (word-processing, using standard software and the Internet)</li> <li>2. communicate scientific ideas</li> <li>3. give oral presentations</li> <li>4. work as part of a team</li> <li>5. use library resources</li> <li>6. manage time</li> <li>7. plan their career.</li> </ul>	<b>Teaching/learning methods and strategies</b> The use of IT is embedded throughout the programme with special sessions in Part 1 and in the Skills Module in Part 2. Oral presentation and communication skills are developed in various modules, culminating in the Part 3 practical project. Career management is taught in the Part 2 Skills module. Teamworking is particularly emphasised in field courses. Time management is essential for the timely and effective completion of the programme. Library resources are required for the literature review in Part 3, and contribute to the best performances throughout. <i>Assessment</i> 1, 2 and 3 are assessed through coursework and particularly the Part 3 project. 4 in field courses, 5 in the project and 7 in the skills module in Part 2. 6 is not directly assessed but contributes to successful performance

*Please note:* This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably expect to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each module can be found in module and programme handbooks.
