

Multi-Choice Assessment

Peter Newton

BSc Information Technology

ABSTRACT

Team based learning is a relatively new method that is getting used more and more within an education environment. There are many different process involved with team based learning to need to be implemented in order to optimise this learning method. A system has been created that encourages the use of team based learning by proving ways that students can improve their learning via discussions with their peers. This is done by students taking a multi-choice individual test followed by the same multi-choice test by completed this time in a team environment. The system also creates a platform for lecturers where they are able to fully understand the processes of team based learning and how they can fully incorporate it within their modules.
