Online Family Photo Sharing Platform

Giuliano Senatore

BSc in Information Technology

ABSTRACT

Today, an overwhelming number of photos can be taken on any camera or mobile device thanks to digital photography and an increased affordable storage on those devices. This leads to various drawbacks such as categorization difficulties, increased probability of photos being lost by an inefficient searching tool and photos mixing with each other which may be of different relevancy. It has therefore been necessary to study, design and implement a solution to solve these issues on my website. The research will explore different methods that can help avoid this from occurring and the final solution created by me to overcome this problem.
