SMS-Mail/RSS Gateway
Asmau Abdulkadir
BSc in Computer Engineering

ABSTRACT
The project is based on monitoring incoming mails from a specific email address which contains four mailing list of the school of systems engineering department. This is set up by the system administrator. Essentially the system administrator adds the mailing list and can view all the mailing list added. The user will be able to login their details if they have register their mobile phone number. If the user is not registered a link will be available for the user to register, this link is called ‘register’. The user will select a list to subscribe. The system will send them a SMS alert whenever there is a new mail from the list they are subscribed to. Users can restrict alert by use of keywords. Users are able to view their subscription. There is also an edit and delete link available for any user who wishes no longer to receive alerts or update their subscription.
