Social Networking for children.
Aliyu Abubakar
BSc. Information Technology

ABSTRACT
This project is based on social networking for children, Specifically Deaf children. The customer for this project is a deaf charity organization called Deafax. The project is an android/iPhone/iPad application that teaches the users how to speak sign language using video clips as well as teaching them how to sign language the complete alphabets A-Z using images. Social networking tools such as Facebook, Twitter and Tag deaf have been integrated into the application to enable and encourage the users to network with the society as well as raise awareness of the activities of Deafax organization. There is also a feedback page that allows the user to leave feedbacks and also make recommendations to Deafax regarding its social activities. This project will also evaluate the potential and impact of social networking tools on promoting activities of organizations and marketing techniques that can be used to achieve such objectives. The name of the application is AlphaDeaf iLearn, a unique name that specifies the category the application is intended for and an idea of its contents.
