ABSTRACT
This project is to create the most annoying alarm clock that can be imagined. The aim of this project is to stimulate as many senses as possible to wake up a vast range of people. The most annoying alarm clock is a flashing light alarm clock. This device wakes one up gradually with ever-increasing amount of artificial lights. The artificial light emitted from this device is designed to stimulate natural light. These lights are emitted from the OLED display of the alarm clock. It has been recommended by doctors that this type of alarm clock can be used for therapy.
