Social Networking for the Very Old & Vulnerable
Michalis Iakovidis
BSc Information Technology

ABSTRACT
This project is about Social Networking. We all know that in our days more people are using social networks day by day. This is because it is an easy way to keep in touch with friends, learn about their news and share your thoughts with them easily. The difference of this project is that it aims to the creation of a Social Network for the very old and vulnerable. This means that it refers to people over 50s and people that are vulnerable or have some kind of disability. In order to achieve this goal I have done some research and investigation on existing social networks, design tools, and tools for implementation of the website.
