IBP R&D FOR NEW STARTERS
Keira Walsh
BSc in Applied Information Technology

ABSTRACT
This paper details the project to develop an e-learning tool for the Infrastructure Business Partners for Research and Development (IBP R&D) at GlaxoSmithKline (GSK). This would replace current informal training methods. This paper also details the approach of the project and different stages undertaken during development. These consist of defining the problem and developing requirements, choosing a suitable solution, design, implementation and presenting the completed tool to the IBP R&D department. This paper looks at the initial aims of the project and the outcomes and feedback from the demonstration. This leads on to what will be completed or researched in the future when deployed into the IBP R&D department.
