

Wellbeing and Public Policy Workshop

The workshop will focus on how well alternative measures of wellbeing correlate and how they can be used in evaluations of public policy outcomes

- How well do current alternative measures of wellbeing correlate?
- Which types of wellbeing measures (self reported happiness, capabilities, human development, etc) are most appropriate to evaluate specific policy outcomes?
- Is it possible to produce a range of alternative social cost-benefit calculations based on different wellbeing measures that can be used to evaluate policy outcomes consistently?
